Gabriel Faria da Silva

Application Support · Full Stack · Team Lead

LinkedIn GitHub

Professional profile

A professional in Application Support and IT Support L2/L3, with experience in Full Stack development, Python data pipelines and team leadership. I investigate incidents, analyse logs and SQL, support APIs and integrations, and coordinate technical teams.

Skills

Team Lead

Git · Jira · Confluence · Docker

- Leading the development of web applications and Python APIs.
- Organisation, responsibility and priority management.
- Project management and team coordination.
- Communication between stakeholders and the project team.

Data

Python · Pandas · PostgreSQL · MongoDB · Apache

- Personal experience with NoSQL databases, including MongoDB.
- Professional experience with data pipelines in Python.
- Processing, cleaning and analysing data with Python and Pandas.
- Data queries, validation and analysis with PostgreSQL and other relational databases.
- Experience with Apache technologies and Kafka stream analysis.

Full-Stack Development

HTML5 · CSS3 · Sass · Bootstrap · JavaScript · TypeScript · ReactJS · Next.js · Vue.js · Node.js · npm · PHP · C# · Java · Figma · Adobe Photoshop · OpenLayers

- Modelling and implementing spatial and relational databases with PostgreSQL and PostGIS, including systems with over 60 tables.
- Developing APIs and backend applications with Java, Node.js, PHP and C#.
- Processing, cleaning and organising spatial data.
- Building interfaces with HTML5, CSS3, Sass, Bootstrap, JavaScript, TypeScript, ReactJS, Next.js and Vue.js.
- Using OpenLayers and ArcGIS Maps SDK to display interactive maps and geometries.
- Using npm for development and Figma and Adobe Photoshop for interface visuals.

Application Support

ServiceNow · OTRS · Jira · Postman

- L2/L3 technical and functional support for enterprise applications and production environments.
- Incident investigation, log analysis and root cause analysis.
- Ticket, priority and SLA management with ServiceNow, OTRS and Jira.
- Coordinating Field Support teams and collaborating with development and operations.
- Using Postman to test APIs.

Systems & DevOps

Docker · Git · Microsoft Azure · AWS · Windows · Linux · PowerShell · Shell Script (Bash) · Ansible · Kubernetes · OpenShift · Jenkins · Terraform · Dynatrace · Zabbix · VMware · Hyper-V

- Windows and Linux system administration and troubleshooting.
- Active Directory, Microsoft 365, Intune and MECM/SCCM.
- Automation with PowerShell, Bash, Python and Ansible.
- Application and infrastructure monitoring with Dynatrace and Zabbix.
- Containers, orchestration and CI/CD with Docker, Kubernetes, OpenShift, Jenkins and Terraform.
- Virtualisation and environment management with VMware and Hyper-V.

Professional experience

SIC

FEB 2025 — PRESENT

L2/L3 application support, systems and infrastructure. Incident investigation, log analysis, SQL validation and API troubleshooting. Administration of Windows Server, Active Directory, Microsoft 365 and Intune; ticket, SLA and CMDB management and support coordination.

Dell Technologies

JAN 2019 — NOV 2023

L1/L2 user support, hardware, system and network diagnosis. Active Directory access management and Field Support team coordination, ticket assignment and SLA tracking.

Grupo Easy · IT Support Technician

JAN 2017 — DEC 2019

Enterprise support, installation and maintenance of Windows and Linux, network, firewall and VPN troubleshooting. Server and datacenter support, cabling, inventory and ticket tracking in Jira.

Education

Systems Analysis and Development

Faculdades Integradas Simonsen · 2019 — 2023

Education in Systems Analysis and Development.

Freelance Work

Freelancer · IT Support, DevOps & Application Support

JUN 2022 — FEB 2025

Support and maintenance of frontend and backend applications, Java applications, APIs and microservices.

SQL queries, Kafka stream analysis and automation with PowerShell, Bash and Python.

Monitoring with Dynatrace and Zabbix and work with AWS, Azure, Docker, Kubernetes, OpenShift, Jenkins and Terraform.

Development & DevOps

Tech Dog

Frontend development and web application support with JavaScript, Git and automation.

Participation in deployment processes and troubleshooting Java applications and integrations.

Support for APIs and relational and non-relational databases.

Cloud, Linux & Monitoring

Global Hits

Support for cloud environments and Linux infrastructure, including troubleshooting and operational support.

Service monitoring with Dynatrace and Zabbix.

Process automation and troubleshooting in Linux.
